

The Feed Caddy – Grower News Flash - 2010

*“I have been in the Chicken Business 35 years...
I have 16 houses to tend too...
My work today is a full time duty, and I need all the help I can get.
If that Caddy breaks down, and I can't put my feed out, I would be
upset.... I would be fit to be tied...
I have owned my Feed Caddy now over 4 years, and I haven't had
one minuets trouble from it...
If something was to happen to this Feed Caddy, I would just buy
another one. I got to have one now!!
I don't want to be without one. I remember all the buckets and
shoveling days. Those days are over with...
I'm getting better start offs, using paper and feed. I wait longer for
the caddy to fill up, than it does to put the feed out...
I know my birds are eating well. They are close by the drinkers,
and the birds have ample feed to last for 4 to 5 days...
I put down 2 runs of paper and feed, in about 30 minuets all by
myself... I use a 24 inch tire, to make a decline in the litter, ahead
of the paper, to prepare a bed for the feed... I place the feed about
3/4 inches thick, on 48 inch wide paper, so the feed stays in the
middle, until it's gone... I still use feed trays, and flood feed to get
the birds trained to move to the feeders...
I bought the Feed Caddy after seeing a picture... I knew I wanted
it. It's is the best money I ever spent!! Good management
practices, ventilation, and clean water along with the Feed Caddy
system, has made the Feed Caddy investment a wise choice.”*
